Revision date: 5/5/2014 1:08:00 PM

Introduction

The "List of Materials with Advance Certification" has been developed for the express purpose of alleviating some of the administrative burden placed on Resident Engineers and Contractors regarding certification requirements for materials used on Vermont Agency of Transportation (VAOT) projects.

The manufacturers of the materials listed have certified that their products furnished for use on Agency projects during the **2015** construction season will conform to the current "State of Vermont, Agency of Transportation Standard Specifications for Construction" and any modifications thereof contained in the General Special Provisions or Special Provisions. The manufacturer's certifications are on file at the Materials and Research Section.

The Resident Engineer is required to:

1. Verify that the material being incorporated in the project is listed.
2. Complete the form TA 555 (Project Materials Acceptance Report).
3. Mail or email the form TA 555 to the Certification and Independent Assurance Unit of the Materials and Research Section.

The Resident Engineer should keep a copy of form TA 555 for his/her records.

This list shall in no way serve as a directive to a contractor as to where materials should be purchased or as an endorsement of the products contained herein. If a contractor elects to use a material other than those listed, certification requirements will be in accordance with the current "State of Vermont, Agency of Transportation Standard Specifications for Construction" and any modifications thereof contained in the General Special Provisions or Special Provisions.
