

Abenaki Medicine and Site Tour

At Shelburne Farms: 1611 Harbor Road Shelburne, VT

Sunday, July 12th 1-3pm

We invite you to come join MycoEvolve's Jess Rubin and Marlie Hunt at the shores of Lake Champlain, where there has been a 7+ year project in creating a restored riparian forested buffer between agricultural fields and the lake.

The restored plots host more than 42 native plants species, which are all significant in their roles within ceremony, food or craft for the Abenaki community. We will visit these restored plots aimed for rematriation through a site tour and workshop involving site history, methodology, socio-political context and plant connections from geologic through post colonial times.
