Subject: follow-up / question about ERFIS values

Hi Lynn,

A few items:

1/ When we visited the facility, you had offered to send us pictures of specific areas at our request. Could you please provide photos of the 1/ intake area – the pumps, the fish basket, anything in that general area; and 2/ the discharge area.

2/ Do you have a digital copy of a map of the facility that includes all the monitoring stations, and what is continually referenced in the permit as outfall serial numbers S/N ? I can't seem to find one in our files, and I think that would be extremely helpful in getting my head around things.

3/ I'm reviewing a data spreadsheet in which one of the columns is labeled "C019 from ERFIS"; can you explain this in a little more detail? (I found the key that says "calculated river temperature change due to plant discharge", but how was it calculated?

4/ and finally, Dave and I enjoyed our visit, and are hoping to come back down again once the cooling towers are up and running. When do you think they'll be on-line?

Thanks so much!
