Begin Construction

Spring 2018

Mt. Holly ER STP 0133(8)

Project Location: Town of Mt. Holly in Rutland County on VT Route 155 approximately 2.20 miles South of the VT Route 140 intersection, in direct proximity to Barlow Road.

Mt. Holly ER STP 0133(8) is a Tropical Storm Irene Recovery Project which caused heavy erosion of the Mill River, specifically an embankment which encroached on to VT Route 155 in this location. During the recovery period, roadways were constructed into working order, yet some areas were not fully stabilized requiring more detailed geotechnical review and design to insure future stability.

This project consists of embankment stabilization along the Mill River, roadway reconstruction, replacement of two(2) culverts with concrete box culverts. Barlow Road will be utilized for access to the river and bottom of the embankment.

Traffic control is anticipated to be alternating one-lane through the construction site with no closures proposed.
