**Note:** These labs are qualified by VTrans in a list of tests requested by the lab managers, however it is the customers responsibility to verify with the individual qualified lab the list of tests they can perform on VTrans projects. The personnel who work at these labs are certified by an outside organization and as such the customer is responsible for verification of lab personnel certifications with the individual qualified lab.

If the customers need testing for concrete and or moisture/density in the field, the customer needs to verify calibration records of the equipment being used and check the personnel certifications. Assuring they are current and certified.
