

**Questions for 10/24/24 Buildings & Thermal Input Session
Cross-Sector Mitigation Subcommittee**

1. You have seen our slides and heard our presentation; do you have additional observations to make regarding the topics we have chosen to focus on, specifically,
 - Buildings,
 - Equipment used in buildings,
 - Fuels used in the equipment, or
 - Cross cutting topics?
2. How are existing policies working, and do you have suggestions for their improvement?
3. Do you favor approaches that focus on incentives, regulations, or some combination of the two in order to reach Vermont's GHG reduction requirements?
4. Are there sources of funding for reducing building sector thermal emissions that we should or should not consider?
5. Affordability is an important goal to emphasize. Are there ideas/approaches that we should consider that would reduce affordability challenges for low- and moderate-income Vermonters?
6. Are there topics that we have missed?
