The estimated replacement costs of systems as they expire annually.
The cost -weighted depleted value of the building compared to the total value of all its systems; overall percent of building useful life consumed by years in service.
The total estimated replacement cost of all the assets listed in the form.
The Total Value of all Assets in the form divide by the Gross Square Footage (GSF) of the building.
The Facility Condition Index (FCI) of the building overlayed on the chart of FCI's for all buildings in the portfolio. Indicated by a red line in the chart.
The current number of remaining years a system may be expected to perform in designed service.
The total number of years a system can be expected to perform in designed service when new.
The total square footage contained within the building for all floors/levels.
The estimated base cost for a single unit of a system. When multiplied by Quantity results in the total system cost.
The amount of a system present in a building. When multiplied by the Cost per Unit results in the total system cost.
The expressed unit of measure for a given system (GSF, EACH, TON, etc).
Buildings on site that are typically known as portables, relocatables or temporary buildings.
