Summer of 2017

Bid Opening

Fall of 2018

Construction Schedule

Spring and Summer of 2019

Pittsfield Bridge #126– BHF 022-1(24)

Project Location: Town of Pittsfield, Rutland County on VT 100, over the West Branch of the Tweed River. The project begins on VT 100 approximately 2.3 miles south of the intersection of VT 100 and VT 107. The project extends 0.04 miles in a northerly direction.

This project will replace Pittsfield Bridge 126 on VT 100.

The existing Pittsfield, VT 100, bridge 126, is a two-span, two lane structure, which was constructed in 1932. The existing spans are concrete T-Beams. The beams are deteriorated and in some areas there is exposed reinforcing steel.

The bridge railing is galvanized steel tubing, installed in 1969.

The bridge is 56 feet in length and it is 35 feet wide. It includes two travel lanes for vehicles a five-foot wide sidewalk, on the south side of the bridge, and shoulders on both sides. The bridge superstructure, which is in poor condition is a paved concrete deck on concrete T-Beams.

The new bridge will be a single-span, galvanized steel beam bridge, with an unpaved, concrete deck. The new bridge rail will be made of a combination of concrete and galvanized steel tubing.

On the bridge there will be two travel lanes and two four foot wide shoulders for pedestrian and bicycle use.

A temporary bridge will be provided to maintain traffic during construction. The temporary bridge will be located just downstream of the existing structure.

Bridge #126

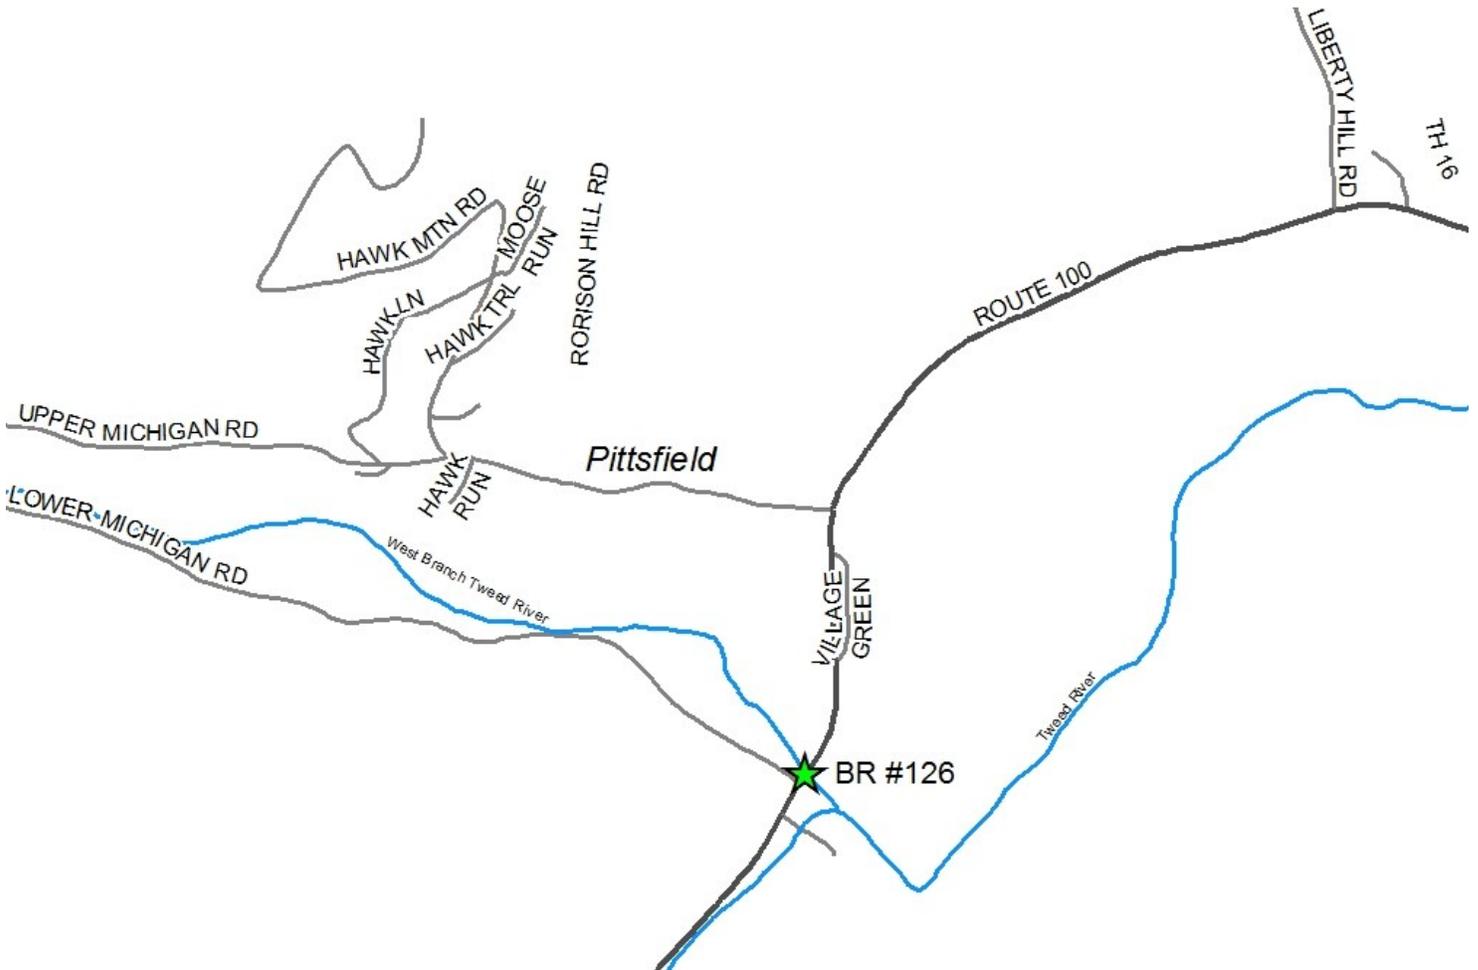

Target Construction Schedule: Construction activities will take place during the spring and summer of 2019.

Project Manager: Douglas Bonneau, P.E.

Existing bridge #1
