RE: New Haven Vermont Shop Details – Submission Set Revisions

To whom it may concern,

This letter is being written as documentation that we have reviewed the shop details for interference between the structural steel components and the precast concrete components in accordance with project specifications. I am satisfied applying my PE stamp to the shop details for submission to VTrans and Parsons Brinkerhoff. It should be noted that Calderwood Engineering has not performed any calculations with respect to the structural capacity of the bridge, and that our stamp represents a review for interference and for conformance to contract details only. No structural calculations have been performed.

Concrete Details:

1. 23475-15 River Road\_rev3.pdf
2. New Haven VT Bridge – JPC Lifting Design Calculations Supplement #1 1-20-16.pdf
3. 3897\_001.pdf

Respectfully Submitted

Eric T. Calderwood, PE
