### Four Week Look Ahead

Date: May 17, 2016

Since the Pre-Construction Meeting held on May 9<sup>th</sup>, the traffic control submittal, work platform submittal and EPSC letter have been submitted.

During the next four weeks the approved work platform will be installed, the traffic control signs will be installed, and the reinforcing steel submittal and concrete mix notice of intent will be submitted.

As a note CPM scheduling is done with finish to start relationships. Negative lags have to be used in order to have successive activities start at the same time, but still be dependent on each other.
