Dear Ms. Bolduc:

Regarding your request for pricing to bring 20 DMTs to current revision levels:

Based on my understanding, bringing these instruments to the current revision level will entail the following:

1. Replace the original CPU (Pn 43602) with the current SI Controller.

This quotation includes freight both directions and all labor to replace the above and bring the instruments to operational condition.

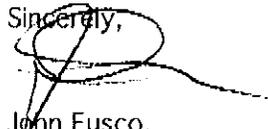

The price for this will be \$990.00 per instrument for a total of \$19,800.00.

As an option you may also wish to bring the controller boards (Pn 41602) to current revision level which would make all your instruments consistent. Should you wish to do this, the controller boards can be included for an additional \$300.00 per unit.

Packaging would be the responsibility of VDH and please advise us if you do not have serviceable shipping boxes as these would be furnished.

Thanks for your consideration and if I can be of further help, please let me know.

Sincerely,

John Fusco,
President

CC. Mr. Robert Drawbaugh
